D. Loan-Backed Securities

(1) The Company uses a proprietary model for loss assumptions and widely accepted models for prepayment assumptions in valuing mortgage-back asset-backed securities with inputs from major third party data providers. The models combine the effects of interest rates, volatility, and pre-payment speeds based on various scenario (Monte Carlo) simulations with resulting effective analytics (spreads, duration, convexity) and cash-flows on a monthly basis. Model assumptions are specific to asset class and collateral types and are regularly evaluated and adjusted where appropriate.

(2) The Company reviews its investments quarterly to identify whether any investments have indications of possible impairment and whether any impairments are other than temporary.

**STATEMENT AS OF SEPTEMBER 30, 2013 OF THE TRIAD GUARANTY ASSURANCE CORPORATION, IN REHABILITATION**

**NOTES TO FINANCIAL STATEMENTS**

**21. Other Items (continued)**

- (4) Underwriting exposure to subprime mortgage risk through Mortgage Guaranty or Financial Guaranty insurance coverage.

As a reinsurer for TGIC, the Company's private mortgage guaranty reinsurance business faces significant direct and indirect exposure to subprime mortgage risk. If the homeowner defaults, private mortgage insurance provided by TGIC reduces and, in some instances, eliminates the loss to the insured lending institution. The Company has direct exposure in providing mortgage insurance reinsurance coverage on subprime mortgage loans, and it has indirect exposure to the extent its reinsurance on other mortgage loans is affected by conditions in the housing and mortgage markets that result from the performance of subprime mortgages, whether or not insured under mortgage insurance coverage.

The Company is operating in run-off and is no longer issuing mortgage insurance policies.

- (a) The Company believes that mortgage credit risk was materially affected by the following underwriting factors:
1. the borrower's credit strength, including the borrower's credit history, debt-to-income ratios, and cash reserves; and
  2. the loan product, which includes the ratio of the original principal balance of the loan to the value of the property at origination (the LTV), the type of loan instrument (including whether the instrument provides for fixed or variable payments and the amortization schedule), the type of property, the purpose of the loan, and the borrower's documentation for the loan.

Excluding other factors, claim incidence increases for loans with lower FICO credit scores compared to loans with higher FICO credit scores; for reduced documentation loans compared to loans with full underwriting documentation; for loans with higher LTV ratios compared to loans with lower LTV ratios; for adjustable rate mortgage loans during a prolonged period of rising interest rates compared to fixed rate loans in such a rate environment; for loans that permit the deferral of principal amortization compared to loans that require principal amortization with each monthly payment; for loans in which the original loan amount exceeds the conforming loan limit compared to loans below such limit; and for cash out refinance loans compared to rate and term refinance loans.

There are also other types of loan characteristics relating to the individual loan or borrower which affect the risk potential for a loan, including the origination practices of the lender and the condition of the housing market in the area in which the property is located. The presence of a number of higher-risk characteristics in a loan materially increases the likelihood of a claim on such a loan unless there are other characteristics to lower the risk.

- (b) The reinsurance premiums vary according to the risk and premiums charged by TGIC, not only on the basis of the level of coverage provided, but also on the perceived risk of a claim on the insured loan and, thus, take into account the LTV, the loan type (fixed payment versus non-fixed payment) and mortgage term, the location of the borrower's credit score within a range of credit scores, and whether the loan is a reduced documentation loan.

TGIC charges higher premium rates to reflect the increased risk of claim incidence that it perceives is associated with certain types of loans, although not all higher risk characteristics are reflected in the premium rate. There can be no assurance that TGIC's premium rates adequately reflect the increased risk, particularly in a period of economic recession or decline in housing values.

To recognize the liability for unpaid losses related to outstanding reported defaults (known as the "default inventory") from TGIC, the Company establishes loss reserves, representing the estimated percentage of defaults which will ultimately result in a claim (known as the "claim rate") and the estimated severity of the claims which will arise from the defaults included in the default inventory (known as the "severity rate") based upon the information supplied by TGIC. In accordance with industry accounting practices, neither the Company nor TGIC establish loss reserves for future claims on insured loans which are not currently in default.

Through TGIC, the Company also establishes reserves to provide for the estimated costs of settling claims, including legal and other fees, and general expenses of administering the claims settlement process ("loss adjustment expenses"), and for losses and loss adjustment expenses from defaults which have occurred, but which have not yet been reported to TGIC ("IBNR").

The Company's reserving process through TGIC is based upon the assumption that past experience provides a reasonable basis for estimating future events. However, estimation of loss reserves is inherently judgmental. Conditions that have affected the development of the loss reserves in the past may not necessarily affect development patterns in the future, in either a similar manner or degree.

SSAP No. 1 requires disclosures illustrating exposure related to the subprime mortgage sector and specifically requires disclosure of the related losses paid, losses incurred, case reserves, and IBNR reserves for subprime loans for the current year. The Company's reserving process is not designed to segregate prime loan reserves from subprime loan reserves, as defined in this disclosure.

To provide reserve and incurred information required by SSAP No. 1, the Company has calculated subprime related case and IBNR reserves for its primary insurance, using the proportionate number of subprime default inventory compared to the total number of default inventory and multiplied that factor by the Company's total case and IBNR reserves, to arrive at subprime case and IBNR reserves as shown in the tables below. The information shown below is based upon the TGIC amounts reinsured to the Company.

The total reserves based upon the credit classifications of TGAC as of September 30, 2013 were as follows:

		<u>As a % of total</u>
Prime	\$3,816,508	62.6%
Alt-A	1,508,903	24.8%
A-Minus	644,871	10.6%
Subprime (A)	<u>124,562</u>	<u>2.0%</u>
Total	\$6,094,844	100%

Losses and reserves related as of September 30, 2013 were as follows:

	<u>Total</u>	<u>Subprime</u>	<u>Subprime as a % of total</u>
Losses paid	\$2,064,986	\$39,532	1.9%
Incurred losses	1,820,136	37,508	2.1%
Case reserves	6,094,843	124,562	2.0%
IBNR reserves	197,207	0	0.0%

(A) For purposes of this disclosure, a "subprime mortgage is defined as a mortgage loan with a FICO credit score below 575. IBNR reserves include unallocated LAE based on direct case reserves.

**24. Retrospectively Rated Contracts & Contracts Subject to Redetermination**

No change since year-end 2012.

**25. Changes in Incurred Losses and Loss Adjustment Expenses**

Reserves as of December 31, 2012 were \$6,548,453. As of September 30, 2013 \$1,974,237 has been paid for incurred losses and loss adjustment expenses attributable to insured events of prior years. Reserves remaining for prior years are now \$5,324,035 as a result of re-estimation of unpaid losses and loss adjustment expenses adjusted for paid claims during 2013 relating to 2012 and prior. Therefore, there has been a \$749,820 unfavorable prior-year development from December 31, 2011 to December 31, 2012. Reserves are established using estimated claims rates (frequency) and claim amounts (severity) to estimate ultimate losses. Management periodically reviews the loss reserve process and refines its methodology as appropriate. The reserving process gives effect to current economic conditions and profiles delinquencies by such factors as policy year, originations within bulk and flow channels, and the number of months a policy has been in default. The Company does not adjust premiums based on claim activity.
